# GR

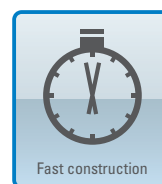

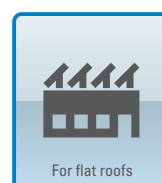

## Mounting-system for green roofs

**Duraklick - GR 100/20** – the mounting system for large photovoltaic arrays on green flat roofs. This system is specially designed for intensively greened roofs, it features higher module supports than our basic system. Often green roofs have a lower ambient temperature than membrane roofs. This results in a higher PV module efficiency, thus increasing the system's profitability.

Its superior Duraklick properties, such as simple assembly, our click-system, and its lightweight aluminium structure further distinguish this system.

### Outstanding features:

- ▶ easy and safe
- ▶ corrosion-resistant and statically tested
- ▶ Made in Germany

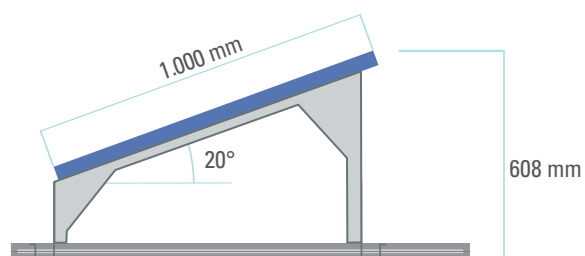

# GR

## Mounting-system for green roofs

### GR 100/20

...suitable for photovoltaic-modules with  
a width of 950 - 1.013 mm. Inclination 20°

#### Technical Specifications

Inclination	20°
Rail length	0,7 - 6,0 m
Modul width	950 - 1.013 mm
Distributed load	ca. 9,8 kg/m <sup>2</sup> *
Liniar load	ca. 16,8 kg/m *
Material	aluminium / stainless steel

\* assuming a module weight of 19 kg
